Introduction

To comply with the revised Payments Services Directive's RTS requirements, ICBC offers a developer portal for Third Party Providers (TPPs) so they can create third-party applications to facilitate open banking services via APIs.

Purpose of this document

This document describes the verification process that TPPs are required to follow in order to on-board with ICBC's developer portal successfully. TPPs must be registered under a Competent Authority in order to use ICBC's Production APIs.

Connect with Open Banking Directory

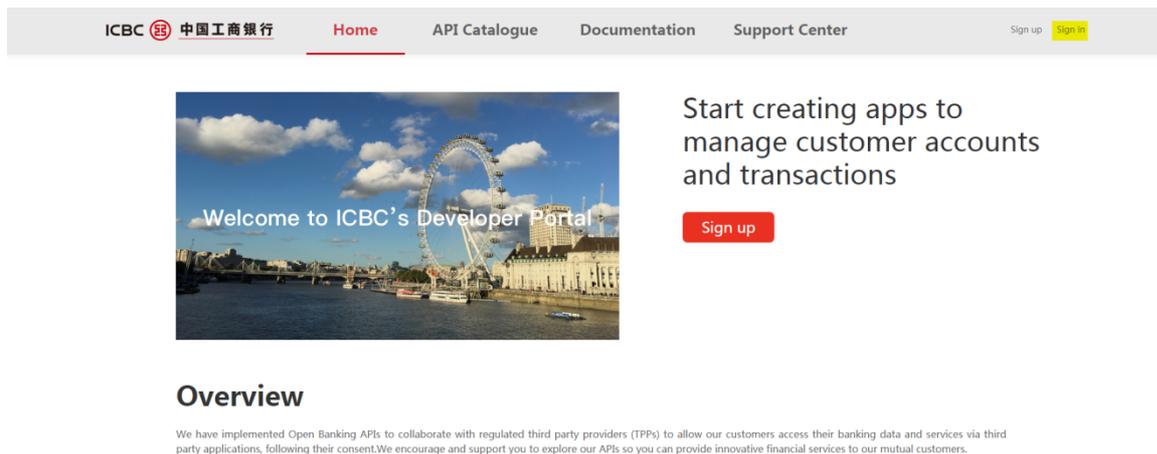

Step 1: Use existing Credentials or Submit an Open Banking Enrolment Form

- Use existing Open Banking Credentials if you are already registered with Open Banking Directory.
- Click here to register with Open Banking Directory <https://directory.openbanking.org.uk/s/login/SelfRegister> and submit an Enrolment Form.
- Follow their registration guidelines <https://www.openbanking.org.uk/wp-content/uploads/Enrolling-Onto-Open-Banking-Guide.pdf>

Login to ICBC Developer Portal

Step 1: Sign in

Click “Sign in” at the top left side on ICBC Developer Portal Homepage (as highlighted below);

ICBC 中国工商银行 Home API Catalogue Documentation Support Center Sign up Sign in

Welcome to ICBC's Developer Portal

Overview

We have implemented Open Banking APIs to collaborate with regulated third party providers (TPPs) to allow our customers access their banking data and services via third party applications, following their consent. We encourage and support you to explore our APIs so you can provide innovative financial services to our mutual customers.

Step 2: Redirect to Open Banking Directory Log in Page

The user will be redirected to Open Banking Directory's Login Page; they must use their existing Open Banking Credentials to log in (as demonstrated below);

OPEN BANKING

Log in

You will need to authenticate yourself at the next step via the PingID app, so please have this ready before you log in.

Step 3: Login successful

Once the user has successfully logged in, they will be redirected to ICBC's Developer Portal Homepage and their Open Banking Account Name will appear at the top left side of this page (as highlighted below);

The screenshot displays the ICBC Developer Portal homepage. At the top, there is a navigation bar with the following elements: the ICBC logo and name in Chinese (中国工商银行), the 'Home' link (highlighted with a red underline), 'API Catalogue', 'Documentation', 'Support Center', a 'Guest' button, and a 'Sign out' link. Below the navigation bar is a large banner image of the London Eye with the text 'Welcome to ICBC's Developer Portal'. To the right of the banner, there is a call to action: 'Start creating apps to manage customer accounts and transactions'. Below the banner, there is a section titled 'Overview' with a paragraph of text: 'We have implemented Open Banking APIs to collaborate with regulated third party providers (TPPs) to allow our customers access their banking data and services via third party applications, following their consent. We encourage and support you to explore our APIs so you can provide innovative financial services to our mutual customers.'

Upload Software Statement Assertion (SSA)

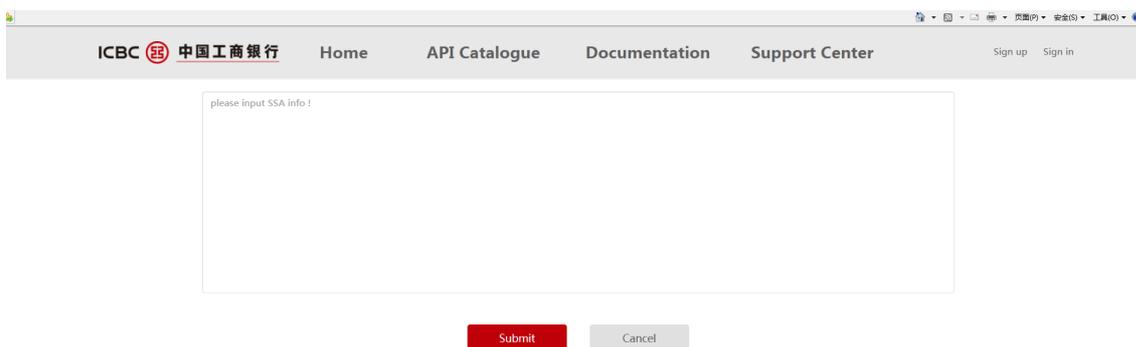

Step 1: In My Applications page Click [+ Create Application](#)

In order to upload your SSA, click on “Create Application” button (as illustrated below);

Step 2: Paste TPP’s Software Statement Assertion (SSA) and click [Submit](#) to upload it.

Upload the SSA that you have obtained from Open Banking Implementation Entity in field below (as illustrated);

The test data in the sandbox environment can be used to test against message conformance during the interface development phase to provide standard test cases for TPPs. An error message will occur for those who do not conform to the message specification and it will request those TPPs to modify both the message and interface usage.

The testing data in the pre-production environment can be used to simulate the business scenarios after TPPs go live. The actual ICBC test system can be used to verify various test cases and abnormal scenarios. Please note the pre-production test environment is only available according to ICBC's test time schedule.

- 1、 TPPs can contact the local support team by raising tickets in the Support Centre. TPPs should provide their contact details for response.
- 2、 The gateway address and sandbox testing data will be provided to TPPs by the support team once we've received the request. TPPs can carry out testing at any time according to their development progress.
- 3、 For the TPPs who do not support sandbox testing interface or if they have already completed sandbox testing, the support team is able to provide pre-production testing gateway address, testing schedule and data. TPPs can carry out the pre-production testing according to ICBC's testing time schedule.
- 4、 TPPs can raise ticket in Support Centre to provide feedback regarding the problems they have encountered during the sandbox testing and pre-production testing. The Support Centre can also be used to track the progress of outstanding queries.
